Summary

A 21 years old software engineer, studied and read a lot of courses in software engineering and machine learning, worked and engaged in many projects as well as problem solving, my graduation project was a distributed system in machine learning.

Achievements

Developed a lot of machine learning algorithms and techniques.
Developed console projects in C# using LINQ.
Developed many text and image compression and processing algorithms.
Developed MiniC compiler using Java.
Developed an online store website and desktop application using Spring Boot framework.
Made an electronic car using Arduino which is controlled by Bluetooth.

Education

Faculty of computers and information Cairo University (FCI-CU), Computer Science (CS) department major and information systems (IS) department minor, graduation year 2019, has no army service GPA 2.92, General grade "Very Good", Participated in a lot of student activities like SCCI "Dev ology", MSTC "Builders & Developers", IEEE "Arduino Geek".

Skills

Python, Java, spring Boot, GitHub, Automation testing, Unit testing, C, C#, C++, SQL, HTML, CSS, PHP, Arduino.
